Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

P.S. To my Congress Rep's. Please put a Stop the War, and IMPEACH PRES. BUSH!!!

Sincerely,

LaMont Clay

Dear Federal Communications Commission,

It doesn't make any sense for a phone to have features that can't be used. When I purchase a phone, I want to be able to use what it can do. The last two phones I've bought from Sprint have had the ability to use certain features turned off to force me to use their less effective, costly versions of the same thing my phone should do for free. This should be against the law!

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

Sincerely,

Cynthia Hahn

Dear Federal Communications Commission,

Policies allowing large companies to shackle great gadgets to their closed networks are not the most productive for society or for the economy.

The FCC and Congress could use the 700MHz spectrum auction create a new, competitive environment by giving consumers:

1. The freedom to use any device on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services through our devices.

The competition to attract this huge consumer market will spur a great wave of innovation in services and devices, with positive social, technological and economic consequences.

Sincerely,

Daimon Sweeney

Dear Federal Communications Commission,

The iPhone has set the stage for the future of mobile Internet -- but bad policies allow companies like AT&T and Verizon to shackle great gadgets to their closed networks.

To free wireless Internet, the FCC and Congress must use the 700MHz spectrum auction to create an open network that gives consumers:

1. The freedom to use whatever device we want on any network.
2. The freedom to choose among many providers in a competitive wholesale marketplace.
3. The freedom to access any content or services we want through our devices.

It is your job as my representative to secure a freely accessible wireless Internet for all United States citizens.

It's public's airwaves, and big, private communication companies should not have the right to restrict access to the public's airwaves. They already make money by providing services. Allowing them to restrict access and services amounts to a restriction of competition and free trade, as well as restricting free speech.

If you are a true conservative, you will insure that the citizens of United States will always have access to the latest technological advances, and not be restricted by monopolistic wireless providers, who will only provide what they can control exclusively.

Sincerely,

Mark Kissinger
